CURRENT SERIAL RECORDS

# Stocks of Grains

## in All Positions

January 25, 1965

### GRAIN AND SOYBEAN STOCKS SMALLER

Stocks of the four feed grains on January 1, 1965, totaled 155 million tons, 10 percent less than last year and 8 percent smaller than average. Wheat stocks were 11 percent less and soybeans in storage declined 6 percent from the record high of a year earlier, according to the Crop Reporting Board. Holdings of each of the four feed grains were smaller than last year. In spite of a drop in all wheat stocks, more durum wheat was on hand than a year earlier. Rye stocks were up sharply from last year but flaxseed in storage totaled nearly one-fourth less.

All wheat in storage on January 1 totaled 1,443 million bushels -- 11 percent less than a year earlier and the smallest January 1 holdings since 1958. The decline from last year occurred in off-farm stocks. Off-farm holdings of 1,052 million bushels were 19 percent smaller than a year earlier while farm stocks at 390 million bushels were 26 percent above January 1, 1964. About 63 percent of the total stocks were either owned by the Government or under Government loan compared with 70 percent a year earlier. Disappearance during the October-December quarter was 369 million bushels, the largest for this period of record started in 1934.

Durum wheat stored in all positions on January 1 totaled 92.4 million bushels compared with 79.2 million bushels a year earlier. Stocks were about equally divided between farm and off-farm facilities with farm holdings totaling 46.5 million bushels and off-farm storages accounting for 45.9 million bushels. Current stocks indicate a disappearance during the first half (July-December) of the marketing year of 14.3 million bushels compared with 18.0 million bushels for the same period a year earlier.

Rye in storage on January 1 totaled 21.0 million bushels -- 43 percent above a year earlier but 7 percent below average. The increase from a year earlier was largely in farm stocks. Farm stocks, at 11.6 million bushels, were more than double the small holdings of a year earlier while off-farm holdings of 9.4 million bushels were only 3 percent higher. Nearly one-fifth of the total stocks was either Government owned or under Government loan compared with about a tenth a year ago. Disappearance during the October-December quarter was 8.7 million bushels compared with 8.2 million bushels during the same period a year earlier.

UNITED STATES DEPARTMENT OF AGRICULTURE

Statistical Reporting Service  
GrLg 11-1 (1-65)

Crop Reporting Board  
Washington, D. C.

Corn stored in all positions on January 1 totaled 3,922 million bushels -- 11 percent less than last year and 9 percent below average. Corn production in 1964 was 13 percent less than in 1963, but carryover of old corn on October 1 was larger than a year earlier. Indicated disappearance of corn during the October-December quarter of 1,137 million bushels was greater than both a year earlier and average.

Corn stored on farms totaled 2,784 million bushels, 14 percent less than last year's record high and the smallest for this date since 1959. Off-farm stocks of 1,138 million bushels were practically the same as a year earlier. Corn owned by or under loan to CCC made up about 74 percent of the off-farm total compared to 71 percent a year ago. Farm stocks under Government loan, including resale quantities, made up 20 percent of the total this year and 18 percent last year.

Oats stored in all positions on January 1, 1965 totaled 712 million bushels, down 61 million bushels from January 1 a year ago and the smallest holdings in the 22 years of record. While off-farm holdings were slightly larger than a year earlier, on-farm stocks, which account for 88 percent of total stocks, were the lowest since 1940. Of the total holdings, 14 percent was owned by the CCC or under Government loan. Disappearance during the October-December quarter totaled 161 million bushels, the smallest for this period during the 22 years of record.

Barley stored in all positions on January 1, 1965 totaled 310 million bushels, down 7 percent from a year earlier, and 14 percent below average. The CCC owned or had under Government loan 16 percent of the total. Stocks on farms totaled 190 million bushels or 61 percent of total stocks, about the same as January 1 a year ago. Disappearance during the October-December quarter totaled 100 million bushels, 3 million bushels more than for this period a year earlier.

Sorghum grain stocks in all positions on January 1, 1965 totaled 952 million bushels, down 7 percent from the holdings of January 1 a year ago, but 2 percent above average. Both farm and off-farm holdings were down from a year earlier. Of the total holdings, 71 percent was either owned by CCC or under Government loan. Disappearance during the October-December quarter totaled 187 million bushels, the third largest of record. Nine-tenths of the holdings were located in Texas, Kansas, and Nebraska.

Soybean stocks in all positions on January 1, 1965 totaled 525 million bushels, down 6 percent from the record high 559 million bushels on hand a year earlier but 10 percent larger than average. Off-farm stocks at 334 million bushels were 12 percent above a year earlier while farm stocks at 191 million bushels were 27 percent smaller than on January 1, 1964.

Stocks on January 1, 1965 indicate a disappearance during the October-December quarter of 207 million bushels from a beginning supply of 732 million bushels (carryover of 32 million bushels plus 1964 production of 700 million bushels). Reported disappearance for the period included 131 million bushels processed for oil and approximately 80 million bushels exported.

## Off-Farm Grain Storage Capacity

Commercial storage establishments in the United States had an estimated off-farm capacity totaling 5,423 million bushels on January 1, 1965. This total is 15 million bushels smaller than a year earlier and marks the second consecutive year in which new construction of storage facilities was less than the capacity of older storages dismantled or dropped from use.

Texas and Kansas continue to rank first and second among the States in off-farm grain storage capacity. Their combined total of 1,754 million bushels makes up almost one-third of the Nation's off-farm grain storage capacity. The North Central States dominate the grain storage picture, having 60 percent of the total off-farm capacity.

The capacity data, by States, include all elevators, warehouses, terminals, merchant mills, ships under private control, other storages and oilseed crushers which store grains, flaxseed or soybeans. Capacity data exclude CCC bins, mothball ships under Government control used to store grain, warehouses used to store only rice or peanuts, oilseed crushers processing only cottonseed or peanuts, tobacco warehouses, and storages that handle only dry beans or dry peas.

### Capacity of Off-Farm Grain Storage Facilities, by States, January 1, 1964 and 1965

(Continued from page 2)

Flaxseed stocks in all storage positions on January 1 totaled 22.9 million bushels or 6.7 million bushels less than holdings a year earlier. Farm stocks were down 18 percent and off-farm stocks were down 25 percent from January 1, 1964.

January 1 stocks indicate a disappearance during the half-year July-December 1964 of 14.6 million bushels from a supply of 37.5 million bushels (carryover of 13.1 million plus the 1964 production of 24.4 million bushels). During the period, 11.4 million bushels were processed and exports totaled 5.8 million bushels.
